

Warranty Finder

by A2C212

Warranty Finder will quickly review your technician story and suggest all applicable labor codes based on the GM Warranty Labor Time Guide. The point and click interface will speed up warranty lookup and submissions, finding all applicable additional times with ease. The application accesses thousands of previously submitted claims to choose the best possible match and maximum times allowed. Even a novice warranty administrator can now manage your warranty submissions!

The interface will move Warranty information right into the job, properly placing all the additional labor and types to the proper time ticket.

How Does it Work?

Simply click the Warranty Finder Button. XSellerator™ sends the data through to Warranty Finder for analysis.

Warranty Finder will suggest the Failure, Complaint and Labor codes based on the data entered in Request Symptoms, saving you valuable time.

Click the Submit button back to XSellerator and proceed with your Warranty submission.
